ENVIRONMENTAL RECORDS RADIUS REPORT

Environmental Database Records Within 1 Mile of the Subject Property

165 Capitol Ave, Hartford, CT 06106

Location note: DATA CURRENCY: State eng./inst. controls: the newest source is dated 2024-02-14 (INST CONTROL; Department of Energy & Environmental Protection); State landfill / SWF: the newest source is dated 2022-01-20 (SWF/LF; CT DEEP). Releases or listings recorded after these dates will not appear in these classes.

✓ 41 databases searched · ✓ queried live from agency services (except 6 sources read from our copies of agency files) · ✓ every record carries its source's currency date · ✓ archived and reproducible (artifact hashes on file) · ✓ 9 exceptions — detailed in the search certification (§11)

Subject location	165 Capitol Ave, Hartford, CT 06106	Coordinates	41.76180, -72.68080
County / jurisdiction	Capitol Planning Region	Assessor parcel no.	247444022
Assessor's address	165 CAPITOL AVE	Parcel area	3.81 acres (1 parcel)
Parcel boundary source	CTOPM-PARCELS	Search radius	1 mile
Report date	September 27, 2026	Report ID	20260927T050828Z-fd41b3

Prepared by **Groundfax**, a product of IQIS LLC (groundfax.com · orders@groundfax.com) · compiled from public federal and state environmental databases · search distances per **ASTM E1527-21**. This compilation supports, and does not replace, a Phase I Environmental Site Assessment.

1 Executive summary

199
mapped records (in search distance)

177
distinct sites

9
on the subject property

14
databases with findings

2301
records screened (radius)

The subject property is listed in 6 databases: ECHO; FINDS; ICIS; PCB; US AIRS; UST.

All 9 of its records are on the subject by address. Each is listed at 165 CAPITOL AVE, and the agency's point lies 36 to 51 ft outside the parcel. §8 shows each match.

This report compiles environmental records from public federal and state sources within a 1-mile radius of the subject property. **199** mapped records fall within the applicable ASTM E1527-21 search distances, of which **9** are located on the subject property itself (9 by the subject's address). The most represented record categories are State Superfund (101), LUST (62), UST (15), Brownfields (8). Each record is plotted on the radius map and listed with its distance and direction from the subject property boundary in the detailed findings.

Record category	Records
State Superfund	101
LUST	62
UST	15
Brownfields	8
FINDS (facility index)	4
Voluntary cleanup	4
PCB inspections	1
ECHO compliance	1
Air facilities (AFS)	1
ICIS enforcement	1
RCRA CORRACTS	1

2 Subject property

Subject location	165 Capitol Ave, Hartford, CT 06106	Coordinates	41.76180, -72.68080
County / jurisdiction	Capitol Planning Region	Assessor parcel no.	247444022
Assessor's address	165 CAPITOL AVE	Parcel area	3.81 acres (1 parcel)
Parcel boundary source	CTOPM-PARCELS	Search radius	1 mile
Report date	September 27, 2026	Report ID	20260927T050828Z-fd41b3

The parcel boundary was obtained from the county/state assessor source above; the geocoded point falls inside it. All distances in this report are measured from this parcel boundary.

3 Physical setting

Subject elevation	63 ft above sea level	Inferred groundwater flow	NNE (31°)
Local relief / slope	48.7 ft over ~0.3 mi · 1.53%	FEMA flood zone	Zone X — outside mapped Special Flood Hazard Areas
Soil (USDA SSURGO)	Urban land	USGS groundwater wells in radius	9
Radon (geologic potential)	Low (Zone 3) — Newark Terrane (Mesozoic Basins)		

Groundwater is assumed to follow the topographic gradient (downhill); each off-site finding is flagged **up- / down- / cross-gradient** in §8 — an up-gradient release is of greater concern, as contamination can migrate toward the subject. Sources: USGS 3DEP elevation, FEMA NFHL flood (Esri-hosted), USDA SSURGO soil, USGS NWIS wells, USGS/EPA geologic radon potential. These are screening indicators, not a substitute for a site-specific hydrogeologic study.

Groundwater wells within 1 mile(s)

USGS NWIS registered groundwater sites, nearest first.

Well / station	NWIS site no.	Distance (mi)	Dir	Surface elev (ft)
CT-H 55	414548072403801	0.23	ENE	29

Frame identifiers that USGS publishes a preview for link straight to the photograph; the rest are the identifiers to search at EarthExplorer, which has no per-scene address of its own. 60 of 60 shown here link directly.

Aerial frames were not downloaded for this report. Aerial frame delivery is not included in this report. USGS queues each download and a measured frame took about nine minutes, so frames are supplied on request rather than generated on demand. Every frame the USGS archive returned for this search box is enumerated above, and each remains available directly from the USGS archive; write to orders@groundfax.com if you would like them pulled for you.

Sanborn fire-insurance maps

22 public-domain volume(s) for Hartford, CT, spanning **1885–1972**.

Map years: 1885, 1900, 1916, 1917, 1918, 1920, 1922, 1923, 1950, 1972

22 public-domain Sanborn volume(s) are available for Hartford, CT spanning 1885–1972. Determined from a complete inventory of the collection captured on 2026-08-16; the Library of Congress catalogue is not reachable from our servers, and the collection has not grown materially since Sanborn stopped surveying. The Library of Congress collection is the public-domain portion of the Sanborn archive — largely pre-1923 nationally, with later volumes for many cities. It is not the complete Sanborn Library; commercial vendors license copyrighted later editions that are not reproduced here.

Sheets are linked at full resolution. They are NOT georeferenced: the Library of Congress does not publish these rectified, so matching a sheet to the parcel boundary remains a manual step for the environmental professional.

Historical city directories

2 publicly available volume(s) for Hartford, CT, spanning **1840–1843**.

Year	Volume	Archive	
1843	Geer's Hartford city directory	Internet Archive	view
1840	Gardners's 1840 Hartford City Directory Connecticut CT	Internet Archive	view

2 publicly available city directory volume(s) identified for Hartford, CT, spanning 1840–1843, from Internet Archive. Library of Congress holdings were NOT searched: its catalogue is not reachable from our servers. A volume held only there would not appear in this inventory. This is a VOLUME AVAILABILITY inventory, not an address-level occupancy search. Commercial vendors additionally offer directory abstracts identifying prior occupants of a specific address; that extraction is not performed here, and an environmental professional relying on directories for prior-use evidence will need to read the volumes or obtain an abstract.

Not searched: Library of Congress. Its directory holdings can be searched directly: Hartford Connecticut city directory ↗

Historical high-risk occupancy (city directories)

Not run for this report. The historical high-risk layer (city-directory extraction) is not included in this report. Each directory volume is a multi-megabyte download and a full parse, so it is run on request rather than for every order. Write to orders@groundfax.com to add it. No conclusion about historical land use should be drawn from its absence here.

Tribal land context

Checked against EPA's published boundaries: American Indian Reservation, Off-reservation trust land, Oklahoma Tribal Statistical Area, Alaska Native Village.

The subject is not within or adjacent to any federally recognised tribal area in EPA's published boundaries (American Indian reservations, off-reservation trust land, Oklahoma tribal statistical areas, Alaska Native villages). No tribal records review is indicated.

Other historical research resources

The remaining ASTM standard historical sources are not carried in this report; these are the public archives for them. Links marked **opened to this location** carry the subject's coordinates; the rest are the archive's front door and need a search:

4 Vapor encroachment screen

ASTM E2600 Tier 1 (non-invasive). Release-type records are screened at **1/10 mile** for petroleum and **1/3 mile** for other chemicals of concern, then classified against the inferred groundwater gradient (flow NNE). Permits and inventory listings — registered tanks, generators, air and water permits — are not releases and are excluded.

Screen conclusion. 3 up-gradient release(s) fall within the E2600 Tier 1 screening distance. A vapor encroachment condition CANNOT be ruled out by this screen; Tier 2 evaluation or site-specific data is required to resolve it.

Limitations. Groundwater flow is inferred from the topographic gradient, not measured from wells; in flat terrain, or where flow is controlled by pumping or a confined aquifer, that inference can be wrong and the environmental professional should override it with site-specific data. A listed release means a release was reported, not that a plume reaches the subject — plume delineation is a Tier 2 exercise. This is a screen, not a determination that a vapor encroachment condition exists.

5 Search methodology

Records were retrieved from public environmental databases for the area within the search radius of the subject property. §11 marks the databases answered from our copies of agency files instead of a live query. For each record, the **distance** reported is the shortest straight-line distance from the record location to the **subject parcel boundary (not its centroid)**, and the **direction** is the 16-point compass bearing from the parcel centroid to the record. Records located within the parcel boundary are designated **TP** (target

property). A record is also designated TP when it gives the subject's street address and its point lies within 500 ft of the parcel. The house number and street must agree, as must the street type and direction where both are given, and the town, ZIP or county.

Each database is screened to the minimum search distance for its record category under **ASTM E1527-21**. Common reference distances are summarized below; the distance actually applied to each database in this report is shown in §11.

Record category (examples)	Approx. min. search distance
Federal NPL / state-equivalent priority sites; RCRA CORRACTS	1.0 mile
Federal CERCLIS/SEMS; RCRA TSD; state cleanup, landfill/SWF, voluntary cleanup/brownfields; LUST	0.5 mile
State registered USTs/ASTs; institutional / engineering controls; generators	Property & adjoining

“Property & adjoining” was resolved against the county parcel fabric: 10 parcel(s) share a boundary with the subject, and a record within 60 ft of one of them is treated as being on it (street and railroad right-of-way polygons are excluded). A record at an adjoining parcel's assessor address also counts as adjoining when its point lies within 500 ft of that parcel. Because the search box is centred on the report point and every distance is measured from the parcel boundary, records were fetched to 1.07 miles from the report point, the ordered radius plus the 0.07-mile reach of the boundary, so each radius-banded search distance is covered on every side of the parcel. Distances and counts depend on positional accuracy of the underlying public records and of the subject geocode. See §11.

6 Findings summary by database

Counts of mapped records by database and distance band. TP = on the subject property.

7 Radius map

Subject property (★) with ASTM search rings at ⅛, ¼, ½ and 1 mile; mapped records colored by record category. North is up. Map keys are omitted on this overview: 199 sites are too dense to label legibly at this scale — see the quarter-mile detail map below, and the detailed findings table, which lists every key.

Quarter-mile detail. Rings at 1/16, 1/8 and 1/4 mile; 44 record(s) within a quarter mile, every one labelled with its map key.

Offline field map. field_map.html is the same records on a zoomable aerial photograph, with every map key labelled at every scale, searchable, and clickable for the detail in section 8. Open it to look around; save it to your device (File → Save, or the download button on your report page) before a site visit and it works with no signal at all.

8 Detailed findings

All mapped records, grouped by distance band and ordered nearest first. Map key references the radius map.

9 Records review narrative

The findings above, stated as prose you can lift into your own report. These are reproductions of the record — distance, direction, gradient, count and source — and nothing more. Whether any listing is a recognized environmental condition is the environmental professional's determination under 40 CFR 312.10, not ours.

State Superfund. 101 records within the applicable ASTM E1527-21 search distance for this category. The nearest is **Connecticut DAS** at 34 ft SE, cross-gradient, listed by the Department of Energy and Environmental Protection. 20 of the 101 are up-gradient of the subject on the inferred groundwater gradient. The remainder range to 1.00 mi.

LUST. 62 records within the applicable ASTM E1527-21 search distance for this category. The nearest is **Hartford Gas Island (Buckingham Garage)** at 26 ft SE, cross-gradient, listed by the U.S. Environmental Protection Agency. 15 of the 62 are up-gradient of the subject on the inferred groundwater gradient. The remainder range to 0.50 mi.

UST. 15 records at 5 mapped locations within the applicable ASTM E1527-21 search distance for this category. 1 is located on the subject property (the State Office Building, listed at the subject's address 36 ft outside the parcel). The nearest is **the State Office Building**, on the subject property, listed by the Department of Energy and Environmental Protection. The remainder range to 421 ft.

Brownfields. 8 records within the applicable ASTM E1527-21 search distance for this category. The nearest is **VINCENT MOTORS** at 0.20 mi SE, cross-gradient, listed by the U.S. Environmental Protection Agency.

The remainder range to 0.49 mi.

Voluntary cleanup. 4 records within the applicable ASTM E1527-21 search distance for this category. The nearest is **Vincent Motors / Hudson Laundry** at 0.23 mi SSE, cross-gradient, listed by the Department of Energy and Environmental Protection. The remainder range to 0.49 mi.

FINDS (facility index). 4 records at 3 mapped locations within the applicable ASTM E1527-21 search distance for this category. 3 are located on the subject property (CONN DPW / STATE OFFICE BLDG, listed at the subject's address 48 ft outside the parcel; FAIRFIELD HILLS, listed at the subject's address 51 ft outside the parcel; STATE OFFICE BUILDES ENERGY NETWORKS, listed at the subject's address 51 ft outside the parcel). The nearest is **CONN DPW / STATE OFFICE BLDG**, on the subject property, listed by the U.S. Environmental Protection Agency.

Air facilities (AFS). 1 record within the applicable ASTM E1527-21 search distance for this category. 1 is located on the subject property (CONN DPW / STATE OFFICE BLDG, listed at the subject's address 48 ft outside the parcel). The nearest is **CONN DPW / STATE OFFICE BLDG**, on the subject property, listed by the U.S. Environmental Protection Agency.

ECHO compliance. 1 record within the applicable ASTM E1527-21 search distance for this category. 1 is located on the subject property (CONN DPW / STATE OFFICE BLDG, listed at the subject's address 48 ft outside the parcel). The nearest is **CONN DPW / STATE OFFICE BLDG**, on the subject property, listed by the U.S. Environmental Protection Agency.

ICIS enforcement. 1 record within the applicable ASTM E1527-21 search distance for this category. 1 is located on the subject property (FAIRFIELD HILLS, listed at the subject's address 51 ft outside the parcel). The nearest is **FAIRFIELD HILLS**, on the subject property, listed by the U.S. Environmental Protection Agency.

PCB inspections. 1 record within the applicable ASTM E1527-21 search distance for this category. 1 is located on the subject property (STATE OFFICE BLDG., listed at the subject's address 36 ft outside the parcel). The nearest is **STATE OFFICE BLDG.**, on the subject property, listed by the Department of Energy and Environmental Protection.

RCRA CORRACTS. 1 record within the applicable ASTM E1527-21 search distance for this category. The nearest is **COLTSVILLE REDEVELOPMENT COMPANY LLC** at 0.92 mi ESE, cross-gradient, listed by the U.S. Environmental Protection Agency.

10 Screening worksheet

Every mapped site in the order an assessment normally works through them: on the subject property first, then up-gradient, then by distance. **This is a sort, not a risk ranking** — the rightmost column states exactly which of those facts put each row where it is, so you can re-sort on your own criteria rather than inherit ours.

#	Map	Facility / site	Database	Distance	Dir	Gradient	Why it sorts here

Showing 40 of 177 sites in review order — the first 40, plus every on-property and adjoining record beyond them, which are never truncated. The full set, sorted the same way, is in the findings workbook.

11 Government records searched

Search certification — exceptions

Every other database in this appendix was searched in full. The 9 listed here are the exceptions, each with exactly what happened and what it means for this report.

Shared points (CT-DEEP-UST, CT-SITES, EPA-ECHO, EPA-FRS, EPA-RCRA, EPA-USTFINDER)	**Not measured:** 322 records were published at 13 points that several sites share while naming different streets or none. Such a point is a common centroid, not the sites, so no distance or adjacency is given. The records are listed with the unmapped records. 28 records from 9 sites, 1,186 ft N of the subject (41.765620, -72.680472), naming 9 streets: Airport, Broad, Capital, Clinton, Homestead, Jennings, Murphy, Route 2 and Sheldon; 16 records from 8 sites, 1,196 ft WNW of the subject (41.763609, -72.685601), naming 1 street: Albany, and 7 sites naming none; 4 records from 4 sites, 1,409 ft NNW of the subject (41.766000, -72.683400), naming 4 streets:

Coventry, Hendrix, Scarboro and Willis; 21 records from 6 sites, 1,610 ft ENE of the subject (41.763417, -72.674053), naming 5 streets: Bartholomew, Homestead, Liebert, Main and Park; 212 records from 208 sites, 1,682 ft ENE of the subject (41.763750, -72.673940), naming 11 streets: Allyn, Ann, Blue Hills, Franklin, Hudson, Huyshope, Lewis, Main, Maple, Park and Wethersfield, and 196 sites naming none; 5 records from 4 sites, 1,877 ft W of the subject (41.762554, -72.688591), naming 4 streets: Ague Spring, Main, Ocean and Tolland; 5 records from 5 sites, 2,354 ft S of the subject (41.755034, -72.682672), naming 1 street:

Washington; 3 records from 3 sites, 2,547 ft NE of the subject (41.766993, -72.673141), naming 1 street: Main; 6 records from 6 sites, 2,675 ft ENE of the subject (41.765103, -72.670756), naming 5 streets: Corner Of The Intersection Of Front, I 91 Over Rt 5, Kensington, Liebert and Reserve Maxim Rds, and 1 site naming none; 9 records from 9 sites, 3,885 ft WSW of the subject (41.758228, -72.695251), naming 1 street: Park; 4 records from 4 sites, 5,466 ft WNW of the subject (41.767682, -72.700296), naming 1 street: Farmington; 5 records from 5 sites, 5,992 ft NE of the subject (41.774429, -72.665311), naming 4 streets: Riverfront Park,

	Riverside Park Boat Ramp, Riverside Park North Of Buckeley Bridge and Wawarme, and 1 site naming none; 4 records from 4 sites, 6,434 ft SW of the subject (41.747720, -72.696209), naming 3 streets: Ferris Roadway, Me Uo Recycler Orerating In and Phase 3A North Mp 39 To Mp 43, and 1 site naming none.

SHWS (CT-SITES)	**Not placed on the map:** “Superstorm Sandy - PCB Cleanup Log - General” (210 CAPITOL AVE, STE- 0000057567); “Hurricane Gloria - PCB Cleanup Log - General” (210 CAPITOL AVE, STE- 0000057567); “DOT Statewide Plan - PCB Cleanup Log - General” (210 CAPITOL AVE, STE- 0000057567). CT DEEP files these PCB cases under one site at 210 Capitol Ave, Hartford, the State Capitol. They are statewide logs or name no property there, so they are not placed on the map. They are listed with the unmapped records.

PCB (CT-SITES)	**Not placed on the map:** “UI - PCB Inspection” (210 CAPITOL AVE, STE- 0000057567). See the note under SHWS (CT-SITES) above. It is listed with the unmapped records.
FINDS (EPA-FRS)	**Agency test entry left out:** “SW TEST 2” (79 ELM STREET, 110072201632), listed 6 times. EPA's registry lists this entry at CT DEEP's headquarters, 79 Elm St, Hartford, under DEEP stormwater permit numbers (FRS 110072201632). Its name marks it as a test of DEEP's permit system. It is not reported as a finding. No other entry is left out.

NPDES (EPA-FRS)	**Agency test entry left out:** “SW TEST 2” (79 ELM STREET, 110072201632), listed 6 times. See the note under FINDS (EPA-FRS) above. It is not reported as a finding. No other entry is left out.
BROWNFIELDS (CT-SITES)	**Agency test entry left out:** “CT DEEP Headquarters Office Brownfield - ABC” (79 ELM ST, Hartford, CT, 06106, STE-0000070363). CT DEEP tests its records system under one site at its headquarters, 79 Elm St, Hartford (STE-0000070363). Cases filed there under the office's own name, or named as a test, are left out. It is not reported as a finding. No other entry is left out.

SHWS (CT-SITES)	**Agency test entries left out:** “CT DEEP Headquarters Office Property Transfer - Form I” (79 ELM ST, Hartford, CT, 06106, STE-0000070363); “CT DEEP Headquarters Office Release Based Case - Cost Recovery” (79 ELM ST, Hartford, CT, 06106, STE-0000070363); “CT DEEP Headquarters Office Release-Based TEST” (79 ELM ST, Hartford, CT, 06106, STE-0000070363); “CT DEEP Headquarters Office Property Transfer - Form III” (79 ELM ST, Hartford, CT, 06106, STE-0000070363). See the note under BROWNFIELDS (CT-SITES) above. They are not reported as findings. No other entry is left out.

LUST (CT-SITES)	**Agency test entries left out:** “TEST in Prod LUST II” (79 ELM ST, Hartford, CT, 06106, STE-0000070363); “LUST TEST III” (79 ELM ST, Hartford, CT, 06106, STE-0000070363). See the note under BROWNFIELDS (CT-SITES) above. “test in Prod LUST” (79 ELM ST, Hartford, CT, 06106, STE-0000070849). CT DEEP makes such entries to test its own records system, and names each as a test. They are not reported as findings. No other entry is left out.

VCP (CT-DEEP-VCP)	**Agency test entries left out:** “CT DEEP Headquarters Office Jan19 Test” (79 ELM ST, Hartford, CT, 06106, STE-0000070363); “CT DEEP Headquarters Office TEST Voluntary Parcel-Wide Cleanup” (79 ELM ST, Hartford, CT, 06106, STE-0000070363). See the note under BROWNFIELDS (CT-SITES) above. They are not reported as findings. Its other cases are listed under CT-SITES; see Listed once in §11.

Write orders@groundfax.com quoting the report number and we will re-run the affected databases at no charge.

Every federal and state database queried for this location — **including those with no findings** — with its ASTM search distance, the number of records in this report, and its currency. **Each database was queried at the time this report was generated** (except the 9 databases read from our copies of agency files, dated as a mirror or as our copy). The date shown is **the agency's own currency date for that dataset** — not the date we last refreshed a copy. Where a date is a retrieval date, a mirror date or a fixed vintage instead, it is labelled as such rather than presented as agency currency.

In the Data as-of column, a bare date is the agency's own last-updated date; "our copy" is the date this engine last refreshed its local copy of that agency's file; "retrieved" means the agency publishes no update date, so only the date this engine downloaded the data is known; "mirror of" is the date this engine last refreshed its local copy of an agency file that carries no update date of its own; "vintage" means a fixed historical compilation that is not updated at all.

Listed once. LUST (CT-DEEP-LUST) and VCP (CT-DEEP-VCP) hold cases that CT-SITES also lists. Each such case appears once, under CT-SITES, with the agency's case number. These add only cases our CT-SITES copy does not list, so their Found cell can be empty.

Not applicable at this location. This source holds records only in the area named, and the search from this property cannot reach it. It was not searched and is not counted above: TRIBAL CLEANUP (U.S. Environmental Protection Agency), Alaska.

Unmapped (orphan) records

358 record(s) were returned by a source but could not be plotted: 36 had no usable coordinates and 322 were published at a point several sites share (see §11, Shared points); they are listed here and excluded from the mapped findings and from every count above. Unmapped records are identified by matching the subject's locality (Hartford, CT), because a record with no coordinate cannot be distance-tested. Address-only records held by a spatial service are filtered out server-side and cannot be enumerated here.

Jurisdiction coverage notes — Connecticut

Every AAI-mandated record class in 40 CFR 312.26 requiring a state source that was not answered from a state source of its own. Rows marked **federal source** were answered nationwide from the EPA source named, and rows marked **in state registry** are carried inside a state registry that was searched. Rows marked **no source exists** were not answered from any state source. Rows marked **partial** were answered in part from a state source; the row says which part. For either, what that means for your assessment is your determination. Full coverage disclosure at groundfax.com/coverage.

Record class	Status	Why
Brownfields	partial	Searched: the brownfield program cases in DEEP's remediation list (BRRP, ABC and MBLR). Also searched: DECD's Brownfield Portfolio, the grants and loans it signed from fiscal 2016 on. DEEP's Brownfields Site Inventory also lists DECD-funded sites that the portfolio does not. We do not search that inventory. EPA's national brownfield list is searched
Reported releases / spills	federal source	DEEP publishes a spill incident log from 1996 on, by town and street, with no map position. We do not search it. EPA ERNS is searched nationwide instead. Releases DEEP handles under its Release-Based Cleanup Regulations are cleanup cases in its remediation list, searched here as SHWS at 1 mile

Extended search beyond ASTM distances

Showing the nearest 300 of 1785. These 1785 records lie within the 1-mile radius ordered but OUTSIDE the E1527-21 search distance for their record type, which is one mile at the widest. They are **not part of the ASTM-mandated search** and are provided because a wider radius was requested. A reviewer checking compliance should read the tables above; this section is additional context.

12 Database descriptions

What each database searched for this property IS, what a listing means, and what it does not mean. An environmental professional documenting reliance under ASTM E1527-21 §8.2.2 needs the third of those as much as the first.

Brownfield Sites (federal and state inventories) (BROWNFIELDS)

U.S. EPA Office of Brownfields and Land Revitalization (ACRES) plus state brownfield programs

BROWNFIELDS combines EPA's federal brownfields grant and assessment inventory with state brownfield program lists (New Jersey, South Carolina, Arkansas, Colorado, Connecticut, Utah, Vermont, Georgia, New Mexico, Florida, Texas, Kentucky, Michigan and others). A listing means the property is enrolled in or was funded by a brownfield program — that is, its redevelopment was treated as complicated by the presence or potential presence of a contaminant. It does not mean contamination was confirmed: many brownfield entries reflect an assessment grant on a property that assessed clean. Nor does it mean a cleanup was completed; program participation and completion are separate facts, and the underlying assessment report is the document that resolves them.

Standard source — federal and state/tribal brownfield sites under 40 CFR 312.26; ½-mile minimum search distance per ASTM E1527-21 §8.2.1. Varies by source; EPA's inventory is refreshed on an ongoing basis and state inventories range from live services to periodic republication.

RCRA Corrective Action Facilities (CORRACTS) (CORRACTS)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo)

Facilities in EPA's RCRAInfo system flagged as subject to corrective action — that is, EPA or an authorized state has required investigation or cleanup of releases from solid waste management units under RCRA Section 3004(u)/3008(h). Inclusion means a regulatory authority has determined that releases at the facility warrant investigation or remediation, which is why ASTM assigns it the same one-mile search distance as the NPL. It does not tell you what was released, whether contamination has migrated off-site, or the status of the work: the corrective-action flag persists after remedies are constructed and after corrective action is deemed complete. Facility-level detail must be retrieved from RCRAInfo or the implementing state agency before the finding is characterized.

Standard source — 40 CFR 312.26(c) federal RCRA CORRACTS facilities list; ASTM E1527-21 approximate minimum search distance 1.0 mile. RCRAInfo is updated continuously by EPA and authorized states; the hosted RCRA Handlers service is republished by EPA periodically with no published cadence.

Connecticut DECD Brownfield Portfolio (CT DECD BROWNFIELDS)

Connecticut Department of Economic and Community Development (via data.ct.gov)

CT DECD BROWNFIELDS lists the brownfield grants and loans Connecticut's Department of Economic and Community Development signed from fiscal 2016 on. Each agreement names the project, the program, the amount and the applicant. A listing means DECD money paid for brownfield work at the property: assessment, abatement, cleanup or area planning. It does not mean contamination was confirmed, and it does not say whether a cleanup is finished. DEEP's brownfield program cases, listed as BROWNFIELDS,

say where a cleanup stands. Where DEEP lists the same address, the report shows both on one row, under DEEP's site name. DECD publishes addresses, not map positions, so we place each property by its address. An area-wide project, or an address we cannot place in its own town, is listed as unmapped for that town.

Standard source: state brownfield sites under 40 CFR 312.26 and ASTM E1527-21 Table 1, searched at 0.5 mile. DECD updates the list about once a year. We copy it weekly, and each report prints DECD's date and the date of our copy.

Delisted (Deleted) National Priorities List (DELISTED NPL)

U.S. EPA, Office of Land and Emergency Management (Superfund)

Sites EPA has deleted from the NPL by rulemaking after determining that no further response is appropriate, also reported by EPA as "Deleted NPL Site" (Groundfax normalizes the label "DELETED NPL" to this entry). Deletion means EPA concluded the selected remedy is complete and protective for the intended use. It emphatically does not mean the site is clean to unrestricted use: deleted sites routinely retain residual contamination, land- or groundwater-use restrictions, engineered caps, long-term monitoring, and statutory five-year reviews, and EPA retains authority to restore a site to the NPL if conditions warrant. A delisted site adjacent to or near the subject is a controlled recognized environmental condition candidate, not a resolved matter.

Standard source — 40 CFR 312.26(c) federal delisted NPL site list; ASTM E1527-21 approximate minimum search distance 0.5 mile. By deletion rulemaking as remedies are completed; service refresh cadence not published by EPA.

ECHO Regulated Facility Universe (Enforcement and Compliance History Online) (ECHO)

U.S. EPA, Office of Enforcement and Compliance Assurance (ECHO)

EPA's consolidated inventory of facilities regulated under the Clean Air Act, Clean Water Act, RCRA, and Safe Drinking Water Act for which compliance-monitoring histories are maintained. Inclusion means the facility is a regulated entity tracked by EPA for compliance purposes — an extremely broad universe that includes routine and fully compliant operations. Groundfax reports the FACILITY, not its compliance status: no violation, inspection, penalty, or enforcement detail is carried on this record, and inferring noncompliance from an ECHO hit is an error. Compliance and enforcement history for a specific facility must be read at ECHO itself before any conclusion is drawn.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. EPA refreshes ECHO weekly from the underlying program systems, though contributing systems load on differing schedules.

Emergency Response Notification System (National Response Center reports) (ERNS)

U.S. Coast Guard National Response Center; compiled by U.S. EPA as ERNS

The record of oil and hazardous substance release notifications telephoned to the National Response Center, the federal point of contact for reporting spills; Groundfax mirrors the full NRC series from 1990 to present. An ERNS record means someone reported a release at that time and place — nothing more. These are raw, unverified initial notifications: the NRC does not confirm, quantify, or follow up on reports, duplicates and later corrections are common, many reports are subsequently determined not to involve a reportable release, and the location is frequently the caller's approximation rather than a surveyed position. An ERNS hit is a lead to be investigated against state spill and cleanup records, not a finding of contamination.

Standard source — 40 CFR 312.26(b) federal ERNS list; subject property only, no radius. NRC publishes one workbook per calendar year, with the current year partial; Groundfax refreshes the mirror on an approximately 90-day cadence.

Facility Index System / Facility Registry Service (FINDS) (FINDS)

U.S. EPA, Office of Environmental Information (Facility Registry Service)

EPA's cross-program facility INDEX: the Facility Registry Service assigns a Registry ID to every site known

to any EPA program system or participating state program and links those identifiers together. Inclusion means only that EPA holds a record that a regulated or reporting facility exists at that location. FINDS contains no compliance, enforcement, release, or contamination information whatsoever — it is a directory, and a FINDS hit standing alone is not evidence of a recognized environmental condition and should never be characterized as one. The diagnostic content is in WHICH program the facility is registered under, and those program interests are reported in this appendix under their own labels (NPDES, US AIRS, TRIS, ICIS, TSCA, SSTS, FUELS PROGRAM, and the RCRA and Superfund classes).

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. FRS is refreshed from contributing EPA program systems on a rolling basis; no per-layer as-of date is published.

Formerly Used Defense Sites (FUDS) (FUDS)

U.S. Army Corps of Engineers (Environmental Restoration Program — FUDS)

Real property formerly owned, leased, possessed, or used by the Department of Defense and transferred out of DoD control before 17 October 1986, for which the U.S. Army Corps of Engineers administers environmental restoration — covering hazardous and toxic waste, military munitions response, containerized waste, and building demolition and debris removal. A FUDS listing means DoD once used the property and it is in the inventory; "eligibility" is a real-property determination about DoD's restoration responsibility, not a determination that contamination exists, and a substantial share of FUDS projects have been evaluated as requiring no further action. FUDS properties are frequently very large — former bombing ranges and installations can span thousands of acres — so a centroid or point cannot answer whether the subject lies inside one; Groundfax therefore searches both the point inventory (about 10,100 properties) and the published boundary polygons (about 3,000) so overlap is tested rather than inferred. Groundfax classes FUDS with state-equivalent Superfund at a one-mile search distance, which is a conservative choice: FUDS is not itself an ASTM-enumerated federal record class.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; carried by Groundfax in the state-equivalent Superfund class at 1.0 mile. USACE updates the FUDS inventory and its GIS publication periodically, broadly in step with annual program reporting; no fixed service cadence is published.

EPA Fuels Program Registrants (OTAQREG) (FUELS PROGRAM)

U.S. EPA, Office of Transportation and Air Quality (OTAQREG), via the EPA Facility Registry Service

Parties registered with EPA's Office of Transportation and Air Quality under the fuels programs — refiners, importers, blenders, oxygenate and renewable fuel producers, and related regulated parties. Inclusion means a fuels-program REGISTRATION is associated with the address; this is a business registration record, and the address on file is very often a corporate or administrative office rather than a facility where fuel is stored or handled. It is not a storage-tank record, not a release record, and not a determination that petroleum was ever present at the location. Corroborate against tank registries (UST FINDER and state tank lists) and historical use before treating a fuels registration as a petroleum-handling land use.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. Registrations are updated as parties register or amend, with annual recertification requirements; the FRS interest layer refreshes on EPA's rolling FRS schedule.

Integrated Compliance Information System (ICIS) (ICIS)

U.S. EPA, Office of Enforcement and Compliance Assurance (ICIS), via the EPA Facility Registry Service

EPA's consolidated system for tracking permits, compliance monitoring, and civil enforcement cases across federal environmental statutes. Inclusion means the facility appears in ICIS as a permitted or compliance-

tracked entity; it is a docket and tracking universe, and presence does not by itself establish that a violation was found, that an enforcement action was filed, or that a release occurred. Where a formal action does exist, its nature, outcome, and any required corrective measures must be retrieved from ECHO or the case file — none of that detail travels with this record. Treat an ICIS hit as an instruction to look at the enforcement record, not as a finding.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. ICIS is updated continuously and flows to ECHO weekly; the FRS interest layer refreshes on EPA's rolling FRS schedule.

Institutional Controls / Environmental Covenant Registries (state) (INST CONTROL)

State cleanup and institutional-control programs (e.g. Michigan EGLE, CDPHE, Kansas KDHE, Oklahoma DEQ, IDEM, MPCA, NDDEQ, Oregon DEQ, MDE, Kentucky EEC)

INST CONTROL is the state registry of legal and administrative restrictions recorded against title — environmental covenants, land use restrictions, activity-and-use limitations, deed notices, and groundwater use prohibitions — as published by Michigan EGLE, CDPHE, Kansas KDHE, Oklahoma DEQ, Indiana, Minnesota, North Dakota, Oregon, Maryland, Kentucky, New York, and others. A listing means residual contamination was left in place and the site was closed to a restricted-use standard rather than remediated to unrestricted use; that is an affirmative statement about the property's condition, not merely a paperwork artifact. It is not an enforcement action and does not mean the control has failed — but it does mean an intended change of use, excavation, or redevelopment could conflict with a recorded restriction. Searched at the subject property only.

Standard source — state/tribal institutional control registry under 40 CFR 312.26; subject property only, no radius. Varies by state and includes known frozen registers: MPCA's control layer is a declared July 2024 snapshot and North Dakota's register is labelled retired as of 2023-12-31, so both are carried as fixed vintages rather than as current data.

Leaking Underground Storage Tanks (LUST)

State tank and petroleum remediation programs (e.g. TCEQ, FDEP, Ohio BUSTR, Oregon DEQ, NMED, VADEQ, CA SWRCB GeoTracker); EPA Office of UST via UST Finder for federal backfill

LUST is the state registry of petroleum or hazardous-substance storage tank facilities at which a release has been reported, confirmed, or is under investigation — TCEQ's LPST list, FDEP petroleum discharges, Ohio BUSTR release incidents, Oregon DEQ, NMED, Virginia DEQ, California GeoTracker LUST cases, and EPA UST Finder releases as federal backfill where a state publishes no live list. A listing means a release was reported at that facility. It does not mean the release is unresolved, that a plume exists, or that anything has migrated to the subject property — a large share of LUST cases are closed, and closure status lives in the record, not in membership. This is one of the highest-yield classes for a Phase I because petroleum releases are common, near-surface, and frequently under-documented at the parcel level.

Standard source — state/tribal leaking storage tank list under 40 CFR 312.26(c); ½-mile minimum search distance per ASTM E1527-21 §8.2.1. Varies by state; most publishing agencies run live services. The EPA UST Finder release layer is a fixed 2021 national compilation and is labelled as a known vintage rather than as current data.

National Pollutant Discharge Elimination System Permits (NPDES)

U.S. EPA, Office of Water (ICIS-NPDES), via the EPA Facility Registry Service

Facilities holding or having held a Clean Water Act permit to discharge pollutants to waters of the United States, including industrial process water, municipal treatment works, stormwater, and construction general permits. Inclusion means a discharge permit exists or existed at the location — an ordinary and expected status for publicly owned treatment works, most manufacturing, and many construction sites. It is not a

violation, an enforcement action, or evidence of a release, and permitted surface-water discharge rarely bears on subsurface conditions at the permitted parcel itself. Permit violations and enforcement history are tracked separately in ECHO and ICIS and must be retrieved there.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. ICIS-NPDES data flows to EPA on a weekly cycle; the FRS interest layer is refreshed on EPA's rolling FRS schedule.

National Priorities List (Federal Superfund) (NPL)

U.S. EPA, Office of Land and Emergency Management (Superfund)

EPA's list of sites of national priority for long-term remedial response under CERCLA, promulgated by rulemaking after a Hazard Ranking System score of 28.50 or greater. A final NPL listing means EPA has documented a release or threatened release of hazardous substances and the site is in the federal remedial pipeline. It does not mean contamination is presently uncontrolled, that the release extends to the subject property, or that no remedy has been completed: many NPL sites are remediated and operating under institutional or engineering controls. The listing is site-wide while the published geometry is a point, so the plotted location may not represent the full site boundary and the true edge of the site may lie closer to the subject than the reported distance.

Standard source — 40 CFR 312.26(c) federal NPL site list; ASTM E1527-21 Table 1 approximate minimum search distance 1.0 mile. NPL additions and deletions occur by Federal Register rulemaking, historically one to two rounds per year; EPA's hosted NPL-with-status service is refreshed on EPA's own schedule, which the agency does not publish.

PCB Inspections (state) (PCB)

Connecticut Department of Energy and Environmental Protection, Remediation Division (REACT, via data.ct.gov)

PCB covers a state's own inspection records on polychlorinated biphenyls: Connecticut DEEP's PCB inspection cases, from DEEP's list of contaminated or potentially contaminated sites. A listing means DEEP inspected PCB equipment, building materials or a PCB spill at the site. It does not mean PCBs remain: nearly all inspection cases are resolved. DEEP's PCB cleanup cases are listed as SHWS and searched at 1 mile. DEEP files some utility cases under one site, so the plotted point can be a utility office rather than the pole or substation. This class is searched at the subject property and adjoining properties only.

Additional source, not listed in ASTM E1527-21 Table 1. We chose to search it at the subject property and adjoining properties, as reported releases are. DEEP publishes the list on data.ct.gov; we copy it weekly, and each report prints the date of the copy it searched.

PFAS Analytic Tools — ECHO/DMR Facilities (PFAS ECHO)

U.S. EPA (PFAS Analytic Tools; ECHO/DMR derived)

Facilities identified through EPA's PFAS Analytic Tools as potentially PFAS-relevant, drawn largely from ECHO discharge monitoring reports and from industry-sector screening of operations known to use or handle per- and polyfluoroalkyl substances. Inclusion frequently reflects INDUSTRY SECTOR or reporting category rather than any measured PFAS detection at the property — metal finishers, textile and paper operations, airports, and wastewater treatment works appear on sector logic alone. This is neither a confirmed PFAS detection, nor a regulatory determination, nor an exhaustive inventory of PFAS sources, and PFAS regulation is evolving rapidly at both federal and state level. Treat a hit as a screening flag requiring source-level verification, and note that PFAS is not addressed as a hazardous substance under CERCLA for all purposes relevant to a Phase I.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. EPA republishes the PFAS Analytic Tools layers periodically as underlying monitoring and sector data are updated; no fixed cadence is published.

Proposed National Priorities List (PROPOSED NPL)

U.S. EPA, Office of Land and Emergency Management (Superfund)

Sites EPA has formally proposed for NPL listing in the Federal Register and opened to public comment, derived here from the Status field of EPA's authoritative NPL service rather than from a separate list. A proposal means the site scored at or above the HRS threshold and EPA intends to list it; the listing decision is not final. Proposals may be finalized, withdrawn, deferred to a state program, or left pending for years, so a proposed site is not necessarily a more or less serious condition than a final one. Groundfax searches proposed listings at the same 1.0 mile as the final NPL because the underlying contamination question is identical.

Standard source — reported with the federal NPL site list under 40 CFR 312.26(c); searched at the NPL distance of 1.0 mile. Follows NPL rulemaking (typically one to two proposal rounds per year); service refresh cadence not published by EPA.

RCRA Large Quantity Generators (RCRA LQG)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo)

Facilities that notified EPA under RCRA as large quantity generators — generating 1,000 kg or more of hazardous waste per calendar month, or more than 1 kg of acute hazardous waste. Inclusion means the site reported hazardous waste generation at that rate; it is a self-reported regulatory status derived from notification and biennial reporting, and it carries no information about spills, releases, or compliance. Generator status reflects the most recent notification on file, so a listed LQG may have closed, changed hands, or downgraded years ago, and the notifier may be a former tenant rather than the current occupant. Because a generator next door is an adjoining-property record class, Groundfax reports LQGs on the subject property and on parcels adjoining it rather than at a radius.

Standard source — 40 CFR 312.26(c)(3) federal RCRA generators list; property and adjoining properties, no radius. RCRAInfo notification data is updated continuously; biennial reports are filed in odd-numbered years for the prior year, so generator status can lag actual operations.

RCRA Non-Generators / No Longer Regulated Handlers (RCRA NONGEN)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo)

Handlers registered in RCRAInfo whose current federal generator status is neither LQG, SQG, nor VSQG — typically sites that notified EPA at some point and are no longer regulated as generators, plus transporters and other handler types. Inclusion means the address is in the RCRA universe and once had a reason to notify EPA; it does not establish current hazardous waste activity, a release, or any regulatory action. In practice this class is most useful as a pointer to a FORMER regulated operation at the address, which may warrant historical-use follow-up. This is not an ASTM-enumerated record class; Groundfax carries it as a supplemental list at the same property-and-adjoining scope as the generator classes.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; reported at property and adjoining properties. RCRAInfo is updated continuously; the hosted RCRA Handlers service is republished by EPA periodically with no published cadence.

RCRA Small Quantity Generators (RCRA SQG)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo)

Facilities that notified EPA as small quantity generators — generating between 100 kg and 1,000 kg of hazardous waste per calendar month. This is the same self-reported notification universe as the LQG list, distinguished only by reported generation rate, and covers a very large population of ordinary commercial

operations such as auto shops, printers, laboratories, and dry cleaners. Inclusion is not evidence of a release, a violation, or contamination; it establishes that regulated hazardous waste was handled at the address, which is relevant chiefly as corroboration of a chemical-handling land use. As with LQGs, status may be stale or attributable to a prior occupant, and the record is searched on the subject and adjoining properties only.

Standard source — 40 CFR 312.26(c)(3) federal RCRA generators list; property and adjoining properties, no radius. RCRAInfo notification data is updated continuously; biennial reporting cycle is odd years for the preceding calendar year.

RCRA Treatment, Storage and Disposal Facilities (RCRA-TSD)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo), via the EPA Facility Registry Service

Facilities permitted, or operating under interim status, to treat, store, or dispose of hazardous waste under RCRA Subtitle C. Inclusion means the facility was authorized to manage hazardous waste beyond the accumulation limits that apply to generators — a land use and permitting status, not a release. Many TSD facilities operate for decades with no documented release; where a release has been identified, the facility will normally also appear under CORRACTS, and the absence of a CORRACTS flag is the meaningful distinction. Historical TSD status at or adjacent to the subject is nonetheless a material land-use fact warranting review of the permit file.

Standard source — 40 CFR 312.26(c) federal RCRA non-CORRACTS TSD facilities list; ASTM E1527-21 approximate minimum search distance 0.5 mile. EPA refreshes FRS program-interest layers from RCRAInfo on a rolling basis; no per-layer as-of date is published.

RCRA Very Small Quantity Generators (formerly CESQG) (RCRA-VSQG)

U.S. EPA, Office of Resource Conservation and Recovery (RCRAInfo)

Facilities reporting generation of less than 100 kg of hazardous waste per calendar month, a category formerly designated conditionally exempt small quantity generator. Inclusion means small volumes of regulated hazardous waste were generated at the address; VSQGs are exempt from most RCRA storage, manifesting, and reporting requirements, so the underlying regulatory record is thin by design. It is not a release record and, given the exemption structure, the presence or absence of a VSQG listing carries little diagnostic weight on its own. Groundfax carries it as a supplemental list at property-and-adjoining scope; ASTM's enumerated generators class covers LQG and SQG only.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; reported at property and adjoining properties. RCRAInfo is updated continuously; hosted service republished by EPA periodically, cadence not published.

Risk Management Plan Facilities (Clean Air Act §112(r)) (RMP)

U.S. EPA, Office of Land and Emergency Management (Risk Management Program)

Facilities that hold a regulated toxic or flammable substance above a threshold quantity and are therefore required to file a Risk Management Plan describing hazard assessment, prevention program, and emergency response. Inclusion means large quantities of an acutely hazardous or flammable material are, or were, present — ammonia refrigeration, chlorine handling, propane and fuel storage, and chemical manufacturing are typical. This is a process-safety and off-site-consequence record, not a contamination record: an RMP filing says nothing about soil or groundwater impact. The five-year accident history within the filed plan is where actual releases, if any, would be documented, and it must be read from the RMP submission itself.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. RMPs must be resubmitted at

least every five years or upon specified changes; EPA's hosted facility layer is republished periodically with no stated cadence.

Superfund Enterprise Management System (formerly CERCLIS) (SEMS)

U.S. EPA, Office of Land and Emergency Management (Superfund), via the EPA Facility Registry Service

EPA's inventory of sites reported to, screened by, or actively managed under the federal Superfund program; SEMS is the system that replaced CERCLIS and is the source of the record class ASTM still refers to by the CERCLIS name. Inclusion means the site entered the federal Superfund pipeline at some stage — a citizen or state referral, a preliminary assessment, a site inspection, removal action, or remedial action. It is not a determination that a release occurred: a large share of SEMS entries were screened and required no further federal action. Groundfax draws SEMS from EPA's Facility Registry Service interests layer, which does not carry the archive indicator, so archived (NFRAP) status is reported separately under SEMS-ARCHIVE and the two labels should be read together.

Standard source — 40 CFR 312.26(c) federal CERCLIS/SEMS list; ASTM E1527-21 approximate minimum search distance 0.5 mile. EPA refreshes FRS program-interest layers from the underlying program systems on a rolling basis; EPA publishes no per-layer as-of date, so the report's currency column reflects what the service itself discloses.

SEMS Archived Sites (CERCLIS NFRAP) (SEMS-ARCHIVE)

U.S. EPA, Office of Land and Emergency Management (Superfund), via EPA Envirofacts

Sites EPA evaluated under the federal Superfund program and then archived as "No Further Remedial Action Planned." An archived entry means EPA assessed the site and concluded it does not warrant further action under the FEDERAL Superfund program — a statement about federal priority and CERCLA jurisdiction, not a finding that the property is clean. Archived sites are routinely transferred to state-lead cleanup programs, and EPA can and does un-archive a site if new information emerges, so an NFRAP designation should be corroborated against the state cleanup registry for the same address. Coverage limit: of the roughly 40,800 archived records EPA publishes through Envirofacts, only about 3,900 carry coordinates; the remaining address-only records reach the report through the unmapped-record path rather than the map, and are disclosed there rather than dropped.

Standard source — 40 CFR 312.26(c) federal CERCLIS NFRAP site list; ASTM E1527-21 approximate minimum search distance 0.5 mile. EPA Envirofacts is maintained continuously; Groundfax holds a local mirror refreshed by an explicit ingest run, so the report dates the mirror rather than the agency unless a source date is available.

State Hazardous Waste Sites / State Cleanup Registry (SHWS)

State environmental agencies, one label across all states (e.g. NYSDEC, FDEP, TCEQ, WA Ecology, MPCA, NMED, OhioEPA DERR, MDE, TDEC)

SHWS is the label applied to a state's master registry of sites identified for investigation or remediation under the state's own cleanup authority — NYSDEC's remediation sites, FDEP's consolidated cleanup list, TCEQ State Superfund, WA Ecology's Toxics Cleanup Program, MPCA remediation, NMED SCP, and their counterparts in roughly forty other states. A listing means the state has opened a site record on a known or suspected release. It does not mean the site is on the federal NPL, does not indicate the stage or severity of the work, and does not by itself mean the case is open — most states carry active and inactive sites in the same registry, with status in the record's own fields rather than in membership. Where a state publishes its closed/no-further-action sites separately, those are carried under SHWS-ARCHIVE rather than here.

Standard source — state/tribal-equivalent NPL / state hazardous waste site list under 40 CFR 312.26(c); 1-mile minimum search distance per ASTM E1527-21 §8.2.1. Varies by state, from nightly-republished live registries to frozen static

extracts. The engine records the agency's own last-edit date where the service publishes one and labels the value 'retrieved' where it does not (see Groundfax/currency.py); the per-source date in the Government Records Searched appendix governs, not this field.

Section Seven Tracking System — FIFRA Pesticide-Producing Establishments (SSTS)

U.S. EPA, Office of Pesticide Programs (SSTS), via the EPA Facility Registry Service

Establishments registered under Section 7 of FIFRA as producers of pesticides or pesticidal devices, which must report production, sale, and distribution annually. Inclusion means pesticides were manufactured, formulated, repackaged, or relabeled at the establishment — a chemical-handling land use of clear Phase I interest, particularly for older agricultural-chemical and formulation sites. It is not a release, spill, violation, or contamination record, and registration says nothing about the quantities handled or the condition of the property. The registered address is the establishment of record and may differ from where product was actually handled.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. Annual production reports are due March 1 for the prior calendar year; the FRS interest layer refreshes on EPA's rolling FRS schedule.

Solid Waste Facilities / Landfills (SWF/LF)

State solid waste programs (e.g. TCEQ, PADEP, VADEQ, Michigan EGLE, Iowa DNR, Missouri DNR, CDPHE, MPCA closed-landfill program, Wisconsin DNR, Delaware DNREC, NHDES, Montana DEQ, SD DANR)

SWF/LF is the state solid waste program inventory: permitted and formerly permitted landfills, transfer stations, compost and recycling facilities, and — where a state publishes them — abandoned municipal landfills and closed-landfill program sites. A listing means the facility appears in the state's solid waste inventory; the label alone does not distinguish an operating transfer station from a closed unlined 1950s dump, and the facility type field must be read. It does not imply a release. The more consequential limitation is the converse: these inventories are permit-derived, so historic unpermitted disposal, burn dumps, and pre-regulation fill areas are largely absent and must be pursued through historical sources rather than through this class.

Standard source — state/tribal landfill and solid waste disposal site list under 40 CFR 312.26(c); ½-mile minimum search distance per ASTM E1527-21 §8.2.1. Varies by state; most are live services tied to permit administration.

TRIBAL LUST (TRIBAL LUST)

US EPA Office of Underground Storage Tanks (Indian country implementation), via UST Finder release records naming the operating tribe.

Confirmed or reported releases from storage tanks in Indian country. Because EPA rather than a state agency implements the program on most tribal lands, these releases are absent from the state LUST list a reader might otherwise expect to cover the area. Status and no-further-action fields carry EPA's own values; a closed case may still have residual contamination, which the record flags separately.

Standard source — TRIBAL leaking storage tank list under 40 CFR 312.26(c); ½-mile minimum search distance per ASTM E1527-21 §8.2.1.

TRIBAL UST (TRIBAL UST)

US EPA Office of Underground Storage Tanks — EPA directly implements the UST program in Indian country where a tribe has not been delegated authority; published via UST Finder with the operating tribe named.

Registered underground storage tank facilities located in Indian country. These are the same facility records EPA publishes nationally, restricted to the 3,178 that name an operating tribe — Groundfax reports them under this heading as well as the federal one so the reader can see which jurisdiction holds the record. A

listing means a regulated tank was registered at the location, not that a release occurred; releases appear under TRIBAL LUST.

Standard source — TRIBAL registered storage tank list under 40 CFR 312.26(c); searched at the subject property and adjoining properties per ASTM E1527-21 §8.2.1, the same scope as a state registered-tank list.

Toxics Release Inventory (TRI) Reporting Facilities (TRIS)

U.S. EPA, Office of Pollution Prevention and Toxics (TRI Program), via the EPA Facility Registry Service

Facilities in covered industry sectors that meet employee and chemical-threshold criteria and therefore file annual reports of releases and transfers of listed toxic chemicals under EPCRA Section 313. Inclusion means the facility manufactured, processed, or otherwise used listed chemicals above reporting thresholds and filed a TRI form. The word "release" in TRI is a defined reporting term that includes PERMITTED stack emissions, permitted water discharges, on-site land disposal, and off-site transfers for treatment or disposal — a TRI listing is not a spill, not an unpermitted release, and not a contamination finding. Because reporting is threshold- and sector-based, absence from TRI does not mean listed chemicals were not used at a property.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. TRI reporting is annual, due July 1 for the prior calendar year, with preliminary data published mid-year and a complete dataset later in the year; the FRS interest layer refreshes on EPA's rolling FRS schedule.

Toxic Substances Control Act Program Facilities (TSCA)

U.S. EPA, Office of Pollution Prevention and Toxics, via the EPA Facility Registry Service

Sites crosswalked to the TSCA program in EPA's facility-interests index — chemical manufacturers, importers, and processors subject to TSCA reporting obligations such as the Chemical Data Reporting rule. Inclusion means the site submitted under a TSCA program; it is a reporting and registration status, not a release, a violation, or a contamination finding. This label is not a PCB record: PCB storage, disposal, and spill records are handled under separate TSCA-authority filings and are not captured by the facility crosswalk used here. Where TSCA chemical handling is material to the property, the underlying submission must be sought from EPA.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. Chemical Data Reporting is submitted on a four-year cycle; the FRS interest layer refreshes on EPA's rolling FRS schedule.

Air Facility System / Air Program Facilities (AFS, ICIS-Air) (US AIRS)

U.S. EPA, Office of Air and Radiation (AFS / ICIS-Air), via the EPA Facility Registry Service

Facilities tracked under Clean Air Act stationary-source programs — major and minor sources with air permits, emissions reporting obligations, or compliance monitoring history. Inclusion means the site is or was a permitted or tracked air-emissions source, which is a statement about operations and permitting, not about soil or groundwater. Air permitting alone very rarely supports a recognized environmental condition; its Phase I value is corroborative, establishing that an industrial or combustion-related process operated at the address. Emission quantities, permit conditions, and any compliance history must be obtained from the permitting authority.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. Air program data flows to EPA periodically from state and local permitting authorities; FRS interest layer refreshed on EPA's rolling FRS schedule.

EPA Brownfields Properties (ACRES) (US BROWNFIELDS)

U.S. EPA, Office of Brownfields and Land Revitalization (ACRES), via the EPA Facility Registry Service

Properties reported to EPA's Assessment, Cleanup and Redevelopment Exchange System — the grant-

reporting system through which recipients of EPA brownfields assessment, cleanup, and revolving loan fund awards document work on specific properties. Inclusion means a grant-funded assessment, cleanup, or redevelopment activity was planned or performed at the property; it does not establish that contamination was found, and a property may be listed because it was assessed and found clean. Completion in ACRES is not a regulatory closure: closure comes from the state cleanup program, not from the grant record. The list is grant-driven and therefore highly incomplete as a brownfields inventory — the great majority of brownfield properties nationally never receive EPA grant funding and never appear here, so state brownfields and voluntary cleanup registries must also be consulted.

Standard-source record class — 40 CFR 312.26(c) brownfields; ASTM E1527-21 approximate minimum search distance 0.5 mile. Served here from a federal dataset; state brownfields lists are reported under separate labels. Updated as grant recipients report property-level progress; the FRS interest layer refreshes on EPA's rolling FRS schedule.

DEA National Clandestine Laboratory Register (US CDL)

U.S. Drug Enforcement Administration

Addresses at which federal, state, or local law enforcement reported finding chemicals, equipment, or dumpsites indicating the clandestine manufacture of controlled substances, most commonly methamphetamine. Presence means a law enforcement agency reported a seizure or discovery at the address; DEA publishes the register with the express caveat that entries are not independently verified for accuracy and that a listed property may since have been cleaned or remediated. Contamination from clandestine manufacture is typically an indoor residue and building-materials issue rather than a subsurface condition, and many states address it through separate property-disclosure and decontamination statutes rather than environmental cleanup law. Coverage limit: DEA blocks programmatic access, and its export silently caps at 600 rows per query, so Groundfax harvests by state and year and discloses any cell that saturates.

Supplemental / EP judgment — not enumerated by 40 CFR 312.26; subject property only. DEA republishes the register periodically as agencies submit entries; no fixed schedule is published, and reporting completeness varies substantially by state.

Federal Engineering Controls (Superfund and RCRA Corrective Action) (US ENG CONTROL)

U.S. EPA (Cleanups in My Community; Region 1 engineered-controls layers)

Sites where the remedy depends on engineered physical containment — caps, liners, slurry walls, vapor barriers, or active treatment systems — as distinct from a legal restriction on use. A hit means the protectiveness of the remedy is contingent on a structure that requires operation, maintenance, and monitoring, and that can fail; this is materially different information from an institutional control and is reported separately for that reason. National coverage is derived from the engineering-control indicator flags in EPA's Cleanups in My Community dataset (only affirmative 'Y' flags are reported; the roughly 11,500 records flagged 'U' for unknown are deliberately excluded to avoid asserting a control on a property where EPA has not), which is point geometry at the facility rather than the control's footprint. Real engineered-control geometry is available only for EPA Region 1 (CT, MA, ME, NH, RI, VT) and is used to supplement, not replace, the national flag-based coverage — so outside New England a control whose footprint reaches the subject may report only at the facility point.

Standard source — 40 CFR 312.26(b) federal engineering control registry; subject property only. Republished by EPA periodically; no published refresh cadence, and the Region 1 geometry layers are maintained regionally.

Federal Superfund Institutional Control Boundaries (US INST CONTROL)

U.S. EPA, Office of Land and Emergency Management (Superfund)

EPA's mapped boundaries of institutional controls at Superfund sites — legal and administrative restrictions such as deed restrictions, environmental covenants, easements, zoning limitations, and groundwater-use prohibitions that a selected remedy relies on to remain protective. A hit means the subject or an overlapping area carries a recorded use restriction, which directly constrains redevelopment and is a primary indicator of a controlled recognized environmental condition. Because the source is polygon geometry, Groundfax reports a control when its boundary overlaps the subject property rather than at a radius. Absence is not evidence that a property is unrestricted: this layer covers Superfund sites only, and state and local activity-and-use limitation registries are reported separately under state institutional-control labels.

Standard source — 40 CFR 312.26(b) federal institutional control registry; subject property (boundary overlap). Republished by EPA as controls are recorded or modified; no published refresh cadence.

Underground Storage Tanks (registered) (UST)

State storage tank programs (e.g. Ohio BUSTR, NJDEP, FDEP, TCEQ, VADEQ, GA EPD, NMED, Alaska DEC, Montana DEQ, NYSDEC PBS); EPA Office of UST via UST Finder

UST is the state inventory of regulated underground storage tanks — facilities that registered tanks with the state tank program, plus EPA UST Finder facilities where a state publishes no live registry. It is an inventory, not a release record: a listing means a regulated tank was registered at that address, nothing more. Absence is equally limited, because residential heating oil tanks, farm and small-capacity tanks, and other categories are exempt from registration in most states and will never appear; a property with no UST record can still have an unregistered tank. Source rows are commonly one per tank, and the engine dedups to facility and location so a multi-tank site is not counted many times.

Standard source — state/tribal registered storage tank list under 40 CFR 312.26(c); searched at the subject property and adjoining properties only, per ASTM E1527-21 §8.2.1 (no radius). Varies by state. EPA UST Finder is a fixed 2021 compilation. Ohio's tank layers are republished as dated extracts with the date stamped into the layer name, which the engine reads where present.

EPA UST Finder — Registered Underground Storage Tank Facilities (UST FINDER)

U.S. EPA, Office of Underground Storage Tanks (compiled from state UST programs)

EPA's national compilation of state-reported underground storage tank facility data, assembled to give a single nationwide view of the regulated UST universe. Inclusion means a regulated UST facility was registered with the state at that location as of the compilation; it does not indicate a release, a violation, or that tanks remain in the ground. VINTAGE IS CRITICAL AND MUST BE DISCLOSED IN ANY RELIANCE: this is EPA's fixed 2021 national compilation, served from UST_Finder_Feature_Layer_2 (migrated 2026-08-11 from the older 2019 service), so tanks registered, closed, or removed after 2021 are not reflected, however recently the data was downloaded. Groundfax uses it to backfill jurisdictions with no live state tank service; where a live state tank registry exists, the state label is the more current record and should govern. Searched on the subject and adjoining properties as a registered-tank record class.

Standard-source record class — 40 CFR 312.26(c) registered storage tanks; property and adjoining properties, no radius. Not updated: this is a fixed 2021 compilation. Groundfax flags it as a known vintage, so a recent download is never presented as current agency data.

EPA UST Finder — Reported UST Releases (UST FINDER RELEASE)

U.S. EPA, Office of Underground Storage Tanks (compiled from state UST/LUST programs)

The release component of EPA's UST Finder compilation: underground storage tank facilities for which the contributing state program had reported a confirmed release. A record here means a release from a tank system was reported to the state regulator — the most directly probative tank-related finding available, and the reason this class is searched at the leaking-storage-tank distance of half a mile rather than at adjoining-property scope. It carries no case status, no closure determination, no contaminant or media detail, and no date of discovery; those must be obtained from the state LUST file. The same fixed 2021 vintage applies, so a release reported after 2021 will not appear, and absence of a release record means only that none was present in the 2021 aggregation — not that no release occurred.

Standard-source record class — 40 CFR 312.26(c) leaking storage tanks (LUST); ASTM E1527-21 approximate minimum search distance 0.5 mile. Not updated: this is a fixed 2021 compilation. It is flagged as a known vintage rather than dated by download time.

Voluntary Cleanup Program Sites (VCP)

State voluntary cleanup / voluntary remediation programs (e.g. TCEQ, CDPHE, Utah DEQ, VADEQ, Oregon DEQ, MDE, TDEC, NDDEQ, GA EPD, LDEQ, CA DTSC)

VCP covers sites enrolled in a state voluntary cleanup or voluntary remediation program — TCEQ VCP, Colorado VCUP, Utah VCP, Virginia VRP, Oregon VCP, Maryland LRP, Tennessee VOAP, North Dakota VRA, Georgia and Louisiana VRP, and California's EnviroStor Voluntary Agreement sites. A listing means a party voluntarily enrolled the property for investigation or remediation under agency oversight, typically to obtain a certificate of completion or a covenant not to sue; it is an affirmative election, not an enforcement action. Enrollment does signal known or suspected contamination, but it says nothing about extent, and the program stage ranges from application through no-further-action — a VCP hit should be resolved to its stage before it is characterized as a REC.

Standard source — state/tribal voluntary cleanup sites under 40 CFR 312.26(c); ½-mile minimum search distance per ASTM E1527-21 §8.2.1. Varies by state; most are live ArcGIS services with no published cadence.

13 Limitations & disclaimer

This report is an automated compilation of records from public federal and state environmental databases and county/state parcel sources, issued under the Groundfax Terms of Service in effect on the report date (groundfax.com/terms). Per those terms, **the ordering party, their client for this property, and any party entitled to rely on the professional report this one is incorporated into — including a lender, a purchaser, or their counsel reading it as an appendix to a Phase I Environmental Site Assessment — may rely on this report as an accurate reproduction of the government records searched, as of the source dates disclosed on each entry**. That reliance is extended here, in the deliverable, so a reviewer does not have to go and read a separate contract to find out whether it applies to them. It **does not constitute a Phase I Environmental Site Assessment** or any opinion as to environmental conditions, liability, or property value — those judgments belong to an environmental professional. Record locations are taken as published by the source agencies and are subject to the agencies' own positional accuracy; some records may be omitted, mislocated, or duplicated at the source, and the absence of a record does not establish the absence of a condition. Distances and directions depend on the accuracy of the subject coordinates and the boundary basis stated in §2. Search-completeness exceptions, data gaps, and source currency are disclosed on the face of this report — in the Search certification in §11, the per-source as-of dates, and the unmapped-records section — rather than left to a blanket caveat.

Reliance letter. A separate, addressable letter stating the above — naming the parties, this property and this report — ships with every order at no extra charge: open the reliance letter. Forward it when a lender's counsel asks whether their client may rely on the appendix.
